

OSPRY
by Legion

PRODUCT GUIDE

See the people behind your traffic.

The complete guide to OSPRY: what it does, how it works, what it costs, and what it changes about your pipeline. Written for the people who will use it.

PRODUCT OSPRY by Legion (formerly Sight by Legion)

METHOD Observe. Score. Profile. Reach. Yield.

AUDIENCE Customers, prospects, and partners

DATE June 2026

IDENTITY RESOLUTION, BY LEGION

A public document from Legion Code Inc. Share it freely.

1. What OSPRY is, in one line

OSPRY turns the anonymous people visiting your website into named buyers you can actually reach. It identifies the companies and US individuals behind your traffic, captures everything they did on your site, writes an AI sales brief on each one, scores them against your ideal customer profile, and routes the best-fit people straight into your CRM, Slack, and outreach tools, all behind a free, built-in consent layer that keeps the whole thing defensible.

If you knew us as Legion Sight or Sight by Legion: same product, new name. OSPRY.

2. The name is the method

OSPRY: Observe. Score. Profile. Reach. Yield.

Observe. See who is on your site, and everything they did.

Score. Qualify each visitor against your ideal customer, 0 to 100.

Profile. Enrich them with an AI-written sales brief: who they are, why they matter, what to say.

Reach. Route the right people to the tools your team already works in.

Yield. The revenue that results. The loop exists for this line.

The whole product is organized on that spine. You will see it as three layers in the app: SEE (Observe), KNOW (Score and Profile), REACH. Yield is your column on the P&L.

3. The problem OSPRY solves

Up to 95 to 98 of every 100 website visitors leave without ever filling out a form. Your analytics shows a number, never a name. This is not a traffic problem; it is a visibility problem. The buyer is already at your door. You just cannot see them.

Without OSPRY	With OSPRY
Analytics shows a count, never a name	Anonymous visits become named people and companies
Sales waits on forms that few people complete	Your best-fit buyers are tagged the moment they land
Hot buyers slip away to whoever calls first	Top leads route to your CRM and Slack automatically
Ad spend with no idea who it pulled in	Every campaign ties back to the real people it reached

4. How it works: See, Know, Reach

Install once. OSPRY names the traffic you already paid for, tells you who is actually interested, and routes the best-fit people where your team already works. You get named people to follow up with, not another dashboard to babysit.

Step 01. SEE: drop in one snippet

Add a single lightweight script to your site, or install it through your tag manager, verify your domain, and you are live in minutes. No engineering project, no data warehouse, no waiting. From then on, OSPRY turns anonymous visits into named people in the US and named companies worldwide. Two identification providers run together, not one, so you name more of your traffic than any single-feed tool can. A live feed updates as new people land.

Step 02. KNOW: identify, read intent, enrich

Identity tells you who. Intent tells you how hot. OSPRY resolves anonymous US visitors to real people, captures exactly what each one did on your site (pages read, downloads, videos finished, repeat visits, where they hesitated), and on Pro+ writes an AI sales brief with a 0-100 fit score against your ICP. It even recognizes contacts you already know the instant they click an email link and land, at no resolution cost. The built-in consent platform gates all of it.

Step 03. REACH: route to your stack

Tag your best-fit leads with a saved ICP filter and route them automatically to HubSpot, Salesforce, Slack, Clay, and 30+ other tools, or pull a CSV. Your team acts while the interest is still fresh. Native ad audiences for remarketing are coming soon.

What the transformation looks like

Before: "Anonymous visitor, one session, viewed /pricing." After: "Jordan Maly, VP Marketing at Brightwave. Viewed pricing twice this week, a strong signal. Routed to HubSpot and #pipeline in Slack."

5. Core capabilities, live today

Person-level identification (US)

See the named person behind a US visit: full name, job title and seniority, validated business email, LinkedIn, company, industry, size, and location. Not an IP address and a guess. You are charged once per person; repeat visits of someone you have already seen are free. US-only by deliberate compliance design. *Starter and up.*

Company-level identification (worldwide)

When OSPRY cannot name the individual, you still get the account, anywhere in the world: company name, domain, industry, employee band, estimated revenue, and the visitor's city and state. Even your non-US traffic becomes named accounts you can prioritize. *Starter and up.*

Multi-provider identification

Most tools run a single identification feed, so you only ever name what that one feed can see. OSPRY runs two providers together on one visitor record: a primary feed plus a ranked secondary that gap-fills the visitors the first never resolves and enriches the ones it does. The result is more of your traffic named than any single-feed tool. *Every paid plan; expanded coverage on Pro+ and up.*

First-party intent and behavior

Go beyond who visited to how engaged they are. OSPRY owns a behavioral layer tied to the identified person: scroll depth and deep scrolls, file downloads, video engagement, form activity, exit intent, and repeat visits. Set a velocity rule once, like three pricing-page hits in seven days or a finished demo video, and OSPRY classifies the visitor and fans them out the moment the threshold is crossed. Behavior signals only: no form values, no copied content, no keystrokes. *Basic intent on Starter; full intent and automation rules on Pro and up.*

AI Insights

Every identified person gets a short, plain-English brief: who they are, why they matter, the buying signals worth noting, ready-to-use talking points for the first message, and a 0-100 fit score against your own ICP that you can sort and filter your entire feed by. A narrative, not a wall of raw data. *Pro+ and up; enrichment draws from your prepaid wallet per brief.*

Top Leads

Describe your ideal customer once, by industry, size, seniority, department, or geography, and OSPRY auto-tags every matching visitor the moment they land, then routes them to Slack, your CRM, or a sequence. A Top Leads filter is a saved, live, named

segment that routes itself. Create as many as you need, each with its own destinations. *Starter and up.*

Top Pages

A visit to your blog is not the same as four visits to your pricing page. Mark your highest-intent URLs (pricing, demo, case studies, product) and instantly filter the people who viewed them, across both your person and company feeds. Repeat visits stack per person, so you can sort by the pages that actually close deals. Top Leads filters by who the visitor is; Top Pages filters by what they did. They work best together. *Starter and up.*

Known Contacts

Upload your contacts or pipe them in: free to load, bulk-safe, no per-contact charge ever, via CSV, a contacts push API, or a native HighLevel webhook. When a known contact clicks a tracked link in your email and lands on your site, OSPRY binds the visit to that contact server-side with no paid resolution. On Pro+, you can show that verified known contact a single-question on-site pop-up survey. *Email click tracking and the free roster on Starter and up; pop-ups on Pro+ and up.*

Free consent management platform

A free, white-label consent platform that gates identification at the source, so the whole loop stays defensible. It is a hard gate, not a toggle: the pixel, the IP and pageview beacons, the intent collector, known-contact recognition, and the on-site survey all sit behind it. A visitor who has not agreed is never identified. Configure categories, languages, themes, layouts, colors, and your logo with a live preview and zero raw CSS, then install one snippet. Free forever, on every plan, no card required. Almost no competitor bundles one.

Integrations and exports

Identified people should not sit in a dashboard. Push them automatically into your CRM, outreach tool, or a Slack channel, or build your own flow with webhooks and a full REST API.

- **Live now:** HubSpot CRM, HubSpot Marketing, Salesforce, Smartlead, Instantly, Clay, BetterContact, Zapier, Make.com, n8n, Slack, webhooks, REST API, and CSV export.
- **Coming soon:** Apollo, Reply.io, Outplay, SmartReach, Mixmax, Salesforge, Samplead, SuperAGI, HeyReach, Aimfox, La Growth Machine, Growth-X, Warmly, Highperformr, HireQuotient, Pocus, Sendspark, Tapistro, Microsoft Teams, Marketo, Outreach, and Salesloft.
- **Need something not listed?** Webhooks and the REST API connect OSPRY to anything, and we will do our best to build the integration you actually need. Ask.
- **Exports:** a date-ranged CSV any time, or a scheduled export plus a daily email digest delivered automatically.

Agency white-label and reselling

Install OSPRY on every client site and report named pipeline back, or go further: run the entire logged-in product under your own brand. Your logos, colors, product name, email sender, and a custom domain with managed TLS. Manage many client accounts from one console with an “Act as” view and per-client usage and billing. Set your own retail price and collect through your own Stripe, keeping the margin. *Agency plan.*

Privacy-first by design

Consent-aware tracking, domain exclusions, and a built-in one-step opt-out path for visitors. Repeat visitors and excluded domains never cost a credit. Person-level identification is US-only by design; company-level is the worldwide baseline. Full legal surface covered: DPA, do-not-sell, opt-out and delete, request-to-know, and withdraw-consent flows.

6. The AI layer: HarleyQ and Pitch Center

OSPRY includes an AI that actually learns your business, not a generic chatbot. Two product lines sit on top of your identity and intent data.

HarleyQ, your conversational AI analyst

A global, always-available chat tray that knows your visitors, your companies, and the documents you have configured. Ask it questions about your own data in plain language and it answers grounded in your records; when the data does not support an answer, it says so plainly. HarleyQ also produces roll-up insights: de-identified, company-level summaries of your buying-intent activity over a window, on a schedule you set or on demand. Strict data boundaries: it blends your private context with org-shared knowledge but never exposes another member's private data.

Pitch Center (PersonaMrktr), AI document generation

Configure your company profile, professional profile, and products and services once, including tone of voice and any regulated-industry constraints. Then generate a sales-ready document, a pitch, a cold-outreach email, a brief, for any resolved person or company from a template, and pipe it to your CRM. Export on demand as unbranded PDF or DOCX. This is the module that writes the pitch and routes it where you work.

7. Plans and pricing

A simple model: start free, then pay a flat monthly access fee for the feature set plus a low per-identified-person rate drawn from a prepaid wallet. You only pay for new, identified people. Repeat visits are free. Wallet funds do not expire. No contracts, cancel anytime. Every paid plan includes the consent platform and public API access.

Plan	Monthly	Per lead	Per enrichment	Domains / Seats	Built for
Free	\$0 forever	n/a	n/a	1 / 1	The white-label CMP only. Gates identification, keeps your stack defensible. No card required.
\$1 Trial	\$1 + \$10 in credits	reduced	reduced	1 / 1	30 days of the full Pro feature set plus AI enrichment and ICP fit score, at reduced rates so the credits go further. Top up anytime.
Starter	\$100	36¢	n/a	1 / 3	Your first identification and behavior layer: basic

Plan	Monthly	Per lead	Per enrichment	Domains / Seats	Built for
					resolution, email click tracking, basic intent, Slack/CSV/webhooks/API.
Pro (most popular)	\$150	33¢	n/a	3 / 10	The daily-pipeline tier: full identity picture, full behavioral layer, automation rules, full connector catalog, scheduled exports.
Pro+	\$250	30¢	18¢	5 / 25	Everything in Pro plus AI enrichment and ICP fit score, on-site pop-up surveys, expanded coverage.
Agency	\$500	27¢	15¢	Unlimited	Everything in Pro+ plus full white-label, sub-accounts and "Act as," and reseller rebilling through your own Stripe.

Remarketing ad audiences will be a focused, a-la-carte paid add-on on top of any plan. You bring your own ad accounts, so there is no per-impression markup.

8. Who it is for

If people visit your site, this is for you. Same idea, three kinds of business.

B2B SaaS

Your buyers research for weeks before they ever fill out a form. See which companies and decision-makers are circling, spot accounts on your pricing and product pages, and hand sales a named, ranked list every morning.

Agencies

Prove your campaigns work. Tie named visitors back to each campaign, show clients the real people your ads and content pulled in, not just clicks, and turn that traffic into booked calls. Run OSPRY white-label under your own brand and rebill clients as a service: a new, high-margin revenue line.

E-commerce and high-ticket

When the cart is big or the sale is considered, anonymous shoppers are lost revenue. Identify high-intent US shoppers who did not check out and route big-basket visitors to a human, fast, before they buy somewhere else.

9. Compliance and privacy

1. **People-level data, in the US only.** Person-level identification is US-only by compliance design. Company-level identification, which is non-personal, works everywhere else, so you stay compliant worldwide.
2. **Consent comes first.** Identification runs through a hard consent gate at the source. The free, white-label consent platform supports geo-aware rules, domain exclusions, and configurable categories.
3. **Opting out is easy.** A one-step opt-out path for visitors, no hoops, plus full do-not-sell, delete-my-data, request-to-know, and withdraw-consent flows.

On GDPR and Australian privacy law: in those regions you get company-level resolution rather than a named individual, which is often cheaper and just as actionable, since you can enrich to find the right contact.

10. How OSPRY is different

Most tools in this category are either cheap and thin, or rich and enterprise-priced. OSPRY pairs best-in-class identification feeds with a layer nobody else has assembled: multi-provider resolution, owned first-party intent, a free consent platform, AI briefs on every visitor, and agency reselling, on a flat fee plus a prepaid wallet.

Capability	OSPRY	Warmly	6sense	Demandbase	Vector
Entry pricing	\$100/mo, monthly	~\$833/mo, annual	Custom annual	Custom annual	\$399/mo + \$36K/yr
Person-level ID (US)	Yes	Yes	Partial	Yes	Yes
Multiple ID providers	Yes	Single feed	Partial	No	No
First-party intent owned	Yes	Limited	Limited	Limited	Limited
Free consent platform	Yes	No	No	Built-in	No
AI per-visitor brief	Yes	Limited	No	Limited	No
Known-contact resolution	Yes	No	No	No	No
Native ABM audiences	Coming soon	Yes	Yes	Yes	Add-on
White-label reselling	Yes	No	No	No	No
Self-serve, no annual lock	Yes	Partial	No	No	Yes

Where competitors win today, said plainly: Warmly has more mature live chat and instant meeting booking, and its retargeting is live now. 6sense has the broadest predictive-intent network. Vector has live ad activation through its separate Target product. Demandbase is a mature enterprise ABM suite. We tell you this because you will find out anyway, and we would rather you hear it from us.

11. What OSPRY changes about your business

- **More pipeline from the same traffic.** No extra ad spend required.
- **Faster speed-to-lead.** Hot buyers are tagged and routed the moment they land, so you reach them before competitors do.
- **Sales efficiency.** Reps stop combing raw visitor lists and start each day with a named, ranked, AI-briefed list.
- **Marketing accountability.** Every campaign ties back to the real people it reached, not just clicks. Every dollar of traffic, accountable.
- **A defensible, privacy-clean stack.** Thanks to the bundled, free consent platform.
- **For agencies: a new, high-margin service line** you can run under your own brand and rebill.

Bottom line

OSPRY converts the anonymous majority of your traffic into named, scored, ready-to-contact pipeline. Observe them, score them, profile them, reach them, and yield the

revenue from visits you were already paying for.

12. On the roadmap, framed honestly

Install today so identification and consent are live, and you are ready the moment these ship.

- **Remarketing / native ABM ad audiences.** Sync identified, consented audiences automatically to Google (Customer Match across Search, Display, Gmail, YouTube), LinkedIn Matched Audiences, Meta Custom Audiences, and TikTok, with Microsoft Advertising and Criteo on the roadmap. Withdraw consent and the next sync removes the person automatically.
- **Programmable Enrichment.** A pay-as-you-go API to enrich one contact or a batch on demand, using the same pipeline that powers visitor briefs.
- **Pixel Container (free).** Load all your marketing pixels through one ultra-fast, consent-aware container. No tag-manager project.
- **Embeddable DSAR Form (free).** A ready-made data-subject-access-request form you can embed on your own site.
- **VisitorTrk.** Real-time, de-anonymized analytics where every event is tied to the resolved person or company, including the share of visitors you are actually capturing. White-labelable on Agency.

13. The company behind it

OSPRY is a product of Legion Code Inc., founded in 2025 and building in public. OSPRY is one product in a broader Legion suite that includes Legion Secure, Legion Atlas, Legion Code, and Legion Cloud, with more on the way. The mission: make every visit count. The vision: become the identity-and-intent layer under the entire go-to-market stack.

14. Get started

Install one small snippet at ospry.ai and watch real people appear in your feed within minutes. Start free with the consent platform, take the \$1 trial (30 days, \$10 in credits at reduced rates) for the full ride, or jump straight into Pro. No contracts, cancel anytime.
