TRUST & PRIVACY

How OSPRY handles identity

The document for your legal team, your DPO, and anyone who asks “is this compliant?” The consent architecture, the deliberate boundaries, and the visitor's rights, stated completely.

PRODUCT OSPRY by Legion
POSTURE Consent-first, US person-level only
AUDIENCE Legal, privacy, and security reviewers
DATE June 2026

IDENTITY RESOLUTION, BY LEGION

A public document from Legion Code Inc. Share it freely.

1. The three principles

1. **Person-level data, in the US only.** Person-level identification runs only on United States traffic, by deliberate compliance design, not by technical limitation. Everywhere else in the world, OSPRY resolves the company, which is non-personal data: firmographics, not people. In GDPR and similar regimes, that is what your visitors get, automatically, with no configuration required.
2. **Consent comes first, as a hard gate.** Identification does not run until consent does. This is enforced at the source, not as a UI toggle.
3. **Opting out is one step.** A visitor can opt out in one action, with no account, no email thread, and no hoops.

2. The consent architecture

Every OSPRY plan, including the free \$0 plan, ships with a white-label consent management platform. It is not an add-on; it is the gate the rest of the product sits behind.

- **What sits behind the gate:** the identification pixel, the IP and pageview beacons, the first-party intent collector, known-contact recognition, and the on-site survey. A visitor who has not agreed is never identified, never beacons, never recognized.
- **Geo-aware rules.** Consent behavior adapts to the visitor's region, so one configuration serves US, EU, and other regimes correctly.
- **Configurable, white-label.** Categories, languages, themes, layouts, colors, and your logo, with a live preview. Your visitors see your brand, behaving correctly.

The claim, precisely

OSPRY does not identify a visitor who has not consented. The gate is architectural: the collectors do not fire without it. This is the difference between consent as a banner and consent as a control.

3. What OSPRY captures, and what it refuses to

Captured (behind consent)	Never captured
Pageviews and repeat visits	Form field values
Scroll depth and reading behavior	Copied or selected content
File downloads and video engagement	Keystrokes
Exit intent and engagement time	Anything outside your own site
Form activity (started / submitted, not contents)	Data from non-consenting visitors

The behavior layer is first-party: OSPRY's own collector on your domain footprint, not a third-party advertising pixel, which keeps your sub-processor list short.

4. The visitor's rights, operationalized

Every right has a working flow, not just a policy page: a one-step opt-out, do-not-sell, delete-my-data, request-to-know, and withdraw-consent. A Data Processing Agreement is published and available at ospry.ai. When native ad audiences ship, withdrawal of consent automatically removes the person from the next audience sync.

5. Billing follows the same discipline

- Repeat visitors never cost a credit; a person is identified and charged once.
- Excluded domains never cost a credit.
- Your own uploaded contacts are recognized at no resolution cost.

Why this is in a privacy document: a vendor with no financial incentive to re-identify people has one less reason to cut corners. The billing model and the privacy posture are the same design.

6. Questions your reviewer will ask

Question	Answer
Is person-level identification GDPR-exposed?	No. Person-level runs on US traffic only. EU and other non-US visitors resolve to company-level, non-personal data.
What happens if a visitor declines consent?	Nothing fires. No identification, no beacons, no behavior capture, no recognition.
Can a visitor be re-identified after deletion?	Deletion flows remove the person; excluded domains and opt-outs are enforced at the gate.
Is there a DPA?	Yes, published at ospry.ai , alongside do-not-sell, request-to-know, and withdraw-consent flows.
Who sees our data?	Your data is yours. The AI features run on your own records with strict per-user and per-org boundaries.

7. Talk to a human

If your legal team has a question this document does not answer, send it. The founders answer support directly, and a straight question gets a straight answer. ospry.ai/contact
