

OSPRY
by Legion

MARKET BRIEF

Why OSPRY

Why the anonymous majority of your traffic is the biggest leak in your funnel, why the current tools fail at fixing it, and what OSPRY built that nobody else has assembled.

PRODUCT OSPRY by Legion

METHOD Observe. Score. Profile. Reach. Yield.

AUDIENCE Public: buyers, partners, press

DATE June 2026

IDENTITY RESOLUTION, BY LEGION

1. Why you should pay attention

Three things changed at once, and together they redraw the go-to-market map.

1. **Traffic got expensive and stayed anonymous.** Ad costs keep climbing while up to 95 to 98 of every 100 visitors leave without a form fill, a signup, or a purchase. The buyer showed up; the business never got to meet them. Every tool in the classic stack (CRM, email, attribution) only acts on the tiny minority who raise their hand.
2. **Privacy went from legal afterthought to buying criterion.** Consent, opt-outs, and data discipline are now things customers check before they install a pixel. Most identification tools treat that as someone else's problem. It is now the product's problem.
3. **AI made the data actionable.** A list of names was never the bottleneck; knowing what to do with each one was. An AI that reads the visitor's actual behavior and writes the brief changes the economics of follow-up.

The one-sentence case

Your attribution tool optimizes the dollar. OSPRY recovers the human. The same ad spend produces more pipeline because the people it brought stop being anonymous.

2. The category is split, and both halves fail you

Website visitor identification today comes in two flavors. On one side, cheap single-feed pixels: they hand you a list of names and nothing else. No behavior, no scoring, no consent layer, no routing. On the other, enterprise suites at \$10K to \$120K+ a year, annual contract first, where identification is one module in a platform you mostly will not use.

The middle, a complete identify-enrich-route loop at a self-serve price, has been empty. That is the gap OSPRY was built to own.

3. What OSPRY built that others did not

Five differentiators, each one verifiable in the product today.

Multi-provider identification

Most tools run one identification feed and inherit its blind spots. OSPRY runs two providers together on one visitor record: a primary resolver plus a ranked secondary that gap-fills what the first misses and enriches what it finds. More of your traffic gets named than any single-feed tool can manage. The honest claim is coverage, and coverage is what closes.

An owned first-party intent layer

Identity without behavior is a cold list. OSPRY owns its behavioral layer: scroll depth, downloads, video engagement, exit intent, repeat visits, and velocity rules like “three pricing-page hits in seven days,” all captured first-party with no third-party pixel and tied to the identified person. Tools that resell a feed cannot match this, because they never built it.

AI that knows your business, not the internet's averages

Every identified visitor gets a plain-English AI brief: who they are, why they matter, buying signals, talking points, and a 0-100 fit score against your ideal customer. Above that, HarleyQ answers questions about your own data in plain language, and Pitch Center generates sales-ready pitches and outreach drafts from your configured company profile. All of it runs on your data, which is exactly why it cannot be copied by a tool that only has the feed.

Consent built in, free, on every plan

OSPRY bundles a white-label consent management platform at \$0, forever, no card required. It is a hard gate, not a toggle: identification, behavior capture, and recognition all sit behind it, and a visitor who has not agreed is never identified. Almost nobody else in the category bundles one at any price. Compliance as a feature, not a tax.

A business model agencies can build on

The Agency plan turns OSPRY into your product: full white-label (your brand, your domain), sub-accounts per client, and reseller rebilling through your own Stripe at your own retail price. The incumbents sell agencies a login. OSPRY sells them a margin.

And the pricing underneath it all

One flat monthly fee for the feature set, plus a prepaid wallet drawn down only as new people are identified. Repeat visits free. Funds never expire. No overage invoices, no annual contract. Start free with the consent platform, or take the \$1 trial: 30 days of everything with \$10 in credits at reduced rates.

4. The market, side by side

Capability	OSPRY	Warmly	6sense	Demandbase	Vector
Entry pricing	\$100/mo, monthly	~\$833/mo, annual	Custom annual	Custom annual	\$399/mo + \$36K/yr
Person-level ID (US)	Yes	Yes	Partial	Yes	Yes
Multiple ID providers	Yes	Single feed	Partial	No	No
First-party intent owned	Yes	Limited	Limited	Limited	Limited
Free consent platform	Yes	No	No	Built-in	No
AI per-visitor brief	Yes	Limited	No	Limited	No
Known-contact resolution	Yes	No	No	No	No
Native ABM audiences	Coming soon	Yes	Yes	Yes	Add-on
White-label reselling	Yes	No	No	No	No
Self-serve, no annual lock	Yes	Partial	No	No	Yes

Every competitor price we publish links to the vendor's own pricing page on our comparison pages, so you can check the math yourself. Pricing shifts; verify before you quote.

Where the others win today, said plainly

Warmly has more mature live chat and instant meeting booking, and its retargeting is live now. 6sense has the broadest predictive-intent network. Vector has live ad activation through its separate Target product. Demandbase is a mature enterprise ABM suite. We publish this because you will find out anyway, and the vendor who told you first is the one you keep.

5. The honesty boundary

OSPRY says three things out loud that competitors tend to bury.

- **Person-level identification is US-only**, by deliberate compliance design. Everywhere else you get the company, which is non-personal, worldwide, and often just as actionable.
- **Coming soon means coming soon.** Native ad audiences are on the roadmap and positioned that way until the day they ship. Nothing roadmap is ever sold as live.

- **The \$1 trial converts.** After 30 days it rolls into a paid plan unless you cancel, and that sentence appears at checkout, not in the fine print.

Why this matters to a buyer

Every claim in this category is checkable within a week of installing. A vendor who is honest about boundaries before the sale is telling you what the support relationship looks like after it.

6. The momentum, in public

- **A feature every 24 hours.** Through this launch window (June 2026), OSPRY ships a new feature daily for 30 days, announced publicly, traceable to the customer who asked.
- **Customer-first roadmap.** The founders answer support, and the build queue is what customers request. If you need an integration we do not have, ask; we will do our best to build it.
- **Shipped, not promised.** Multi-provider identification, the behavior layer, AI briefs, HarleyQ, Pitch Center, the consent platform, known contacts, white-label reselling: live today, on plans that start at \$0 and \$1.

7. See it on your own traffic

The fastest way to evaluate OSPRY is on your own site, with your own visitors. One snippet, live in minutes. Start free with the consent platform, or take the \$1 trial and watch named people appear in your feed: Observe them, Score them, Profile them, Reach them, and Yield the pipeline that was leaking all along.
