COMPARISON // OSPRY VS 6SENSE

OSPRY vs 6sense

6sense is the enterprise standard for predictive ABM: a massive intent network, account scoring, and orchestration, sold as a custom annual platform with reported pricing from \$40K to well past \$120K a year. OSPRY is not trying to be 6sense. It is the self-serve answer for teams who need named visitors and routed pipeline this week, not a platform rollout this quarter.

	OSPRY	6sense
Entry price	\$100/mo, monthly, self-serve	Custom annual; reported \$40K-\$120K+/yr
Time to live	Minutes (one snippet)	Weeks to months, with implementation
Person-level ID (US)	Yes, named individuals	Partial; account-centric
Intent data	First-party, from your own site	Third-party predictive network
AI per-visitor brief	Yes	No (account-level insights)
Consent platform	Bundled free	No
Contract	None; cancel anytime	Annual platform agreement
Best-fit team	Founder-led to mid-market	Enterprise revenue orgs

Where 6sense wins today, said plainly

6sense's predictive intent network is the broadest in the category: it can tell you accounts are in-market before they ever touch your site. If you are an enterprise org with the team to run it, that is a capability OSPRY does not have and is not pretending to.

How to choose

- **Pick 6sense if:** you are an enterprise revenue organization buying a predictive ABM platform, with the budget, the RevOps team, and the quarters to deploy it.
- **Pick OSPRY if:** you want named people from your actual traffic, routed to your stack this week, at a price a founder can put on a card.

The bottom line

6sense predicts who might be in-market across the internet. OSPRY names who is already on your site. For most teams under \$10M ARR, the second one pays for itself first.

Try it on your own traffic: start free with the consent platform, or take the \$1 trial (30 days, \$10 in credits at reduced rates) at ospry.ai. Every price above is checkable on the vendor's own pricing page; we link to them on ospry.ai/compare.
