COMPARISON // OSPRY VS RB2B

OSPRY vs RB2B

RB2B does one thing well: self-serve, US person-level visitor identification, with a free tier that made the category accessible. Respect for that. The comparison is not about whose names are better; it is about what happens after the name shows up.

	OSPRY	RB2B
Entry price	\$100/mo + \$1 trial	Free tier; paid self-serve from ~\$79/mo
Identification	Two providers, gap-filled on one record	Single feed, person-level US
What you get per visitor	Identity + behavior + AI brief + ICP score	The identity
First-party intent	Owned behavior layer, velocity rules	No
Consent platform	Bundled free, every plan	No
Known-contact recognition	Yes, server-side, no resolution cost	No
Routing	30+ connectors, webhooks, full API	Slack-first, lighter catalog
White-label reselling	Yes (Agency plan)	No

Where RB2B wins today, said plainly

RB2B is cheaper at the entry, dead simple, and its free tier is real. If all you want is names in a Slack channel and zero learning curve, it does that with less to configure.

How to choose

- **Pick RB2B if:** you want the lowest possible cost of seeing names, full stop, and your team will do all the qualification and follow-up work manually.
- **Pick OSPRY if:** you want the name plus what they did, an AI brief on each one, a fit score you can rank by, consent handled, and automatic routing into the tools your team already runs.

The bottom line

A name without behavior is a cold call. OSPRY is for teams that want the whole loop: Observe, Score, Profile, Reach, Yield, not just the first step.

Try it on your own traffic: start free with the consent platform, or take the \$1 trial (30 days, \$10 in credits at reduced rates) at ospry.ai. Every price above is checkable on the vendor's own pricing page; we link to them on ospry.ai/compare.
