

OSPRY vs Vector

Vector splits the job in two: Reveal for visitor identification at \$399 a month, and Target for ad activation at around \$36K a year. OSPRY keeps the loop in one product, at one price, with consent and AI included rather than sold separately.

	OSPRY	Vector
Entry price	\$100/mo, monthly	\$399/mo (Reveal)
Ad activation	Coming soon, a-la-carte add-on	Separate Target product, ~\$36K/yr
Identification	Two providers on one record	Single feed
First-party intent	Owned behavior layer, velocity rules	Limited
AI per-visitor brief	Yes, with ICP fit score	No
Consent platform	Bundled free, every plan	No
Known-contact recognition	Yes	No
White-label reselling	Yes (Agency plan)	No

Where Vector wins today, said plainly

Vector's ad activation is live today through Target, while OSPRY's native audiences are still coming soon. If contact-level ad targeting is the single thing you are buying and the Target budget exists, they have the shipped product.

How to choose

- **Pick Vector if:** live contact-level ad activation is the core requirement right now and ~\$36K a year for Target is acceptable.
- **Pick OSPRY if:** you want identification, behavior, AI briefs, consent, and routing in one self-serve product at a quarter of Reveal's entry price, with ad audiences arriving as an add-on rather than a second contract.

The bottom line

Vector sells you the loop in two products. OSPRY ships it as one, starting at \$1, with the consent layer and the AI included instead of invoiced.

Try it on your own traffic: start free with the consent platform, or take the \$1 trial (30 days, \$10 in credits at reduced rates) at ospri.ai. Every price above is checkable on the vendor's own pricing page; we link to them on ospri.ai/compare.
